The Boston Fern

This graceful *Nephrolepis* differs from the ordinary Fern in having much longer fronds, which frequently attain a length of 4 feet. These fronds arch and droop over very gracefully, on an account of which it is frequently called the "Fountain Fern." 15c.

Nephrolepis Scotti

The dwarf Boston Fern

This is the latest and probably the best house plant of all the Sword Ferns, identical to the celebrated Boston Fern, except that it is smaller in all its parts, more compact, and makes a nice specimen in a short time. 25c.

New Fern "Piersoni"

The feathery plume-like fronds grow broad and heavy, measuring 6 inches across, increasing in beauty as they develop. On account of the weight of the foliage, the plant assumes an exceedingly graceful appearance. 15c.

It is delightfully perfumed reminding one of the Jasmine and lacking the heavy oppressive odor of most Lilies. Blooms out of doors early in July.

CRSS—WATER. This can be grown in any moist place. Packet, 10c.

Radish Crimson Giant. New in 1903. It is a scarlet turnip variety, growing over two inches in diameter, without becoming pithy in the least; crisp, mild, and tender, and very early. Packet, 10c.

New "Triumph" Radish. This extra early Radish is a distinct novelty. The small, round, pure white roots are marked with bright scarlet, in flakes and in short lines running around the circumference. The bright, contrasting colors are most attractive; skin thin; flesh crisp, tender and mild. Per packet, 5c.; oz., 20c.

Radish Scarlet Globe. This is my favorite for table use and general planting, and make several plantings each year of it in my garden. Very deep scarlet, sharp oval form of medium size, solid, tender, crisp and mild; remains in eating condition longer than any other. Packet, 5c.; oz., 20c.

Iccle, the Best Early Long White Radish. Exceedingly tender and fine flavored. Half-long white Radish, resembling the Strassburg in size, but of quicker growth; very smooth and regular in appearance, with pure white skin, and exceedingly delicate and brittle. Pkt., 5c.; oz., 25c.

Defender Muskmelon

(FERRY). This melon, of our own development, is, in some respects, the best sort yet produced. There is no variety in which the flesh is of fine quality and flavor so near to the rind as in this, and none in which the rind is so thin, hard and firm. We believe that in sweetness it is fully equal to the Rocky Ford or Netted Gem, and it has, in addition, the high flavor peculiar to such orange-colored sorts as Osage, Surprise and Emerald Gem. Packet, 5c.; oz., 25c.

"PAUL ROSE" New Muskmelon. In the "Paul Rose" we are offering the best Muskmelon introduced for many years. It is a successful cross of the Osage with the Netted Gem, and combines the sweetness of the former with the fine netting of the Gem. No other melon equals it in smallness of seed cavity, nor approaches it in firmness. Packet, 5c.; oz., 20c.

ROCKY FORD MUSKMELON. I offer true seed of this famous Melon. Improved Netted Gem; very sweet and fine flavored; oblong. Packet, 5c.; oz., 20c.

"Central Park" Lawn Grass Seed.

No seed ever sown can surpass this well-trying mixture. The seed is selected and mixed to get the quickest, greenest, and thickest sod possible. I put plenty of perennial grasses in this to stand for years and through the longest droughts. A deep velvety green is soon obtained by sowing this seed.

1 pint 20c.; quart, 35c.; 1 peck \$2.00; 1 bushel \$5.50. A quart will sow 300 square feet. The prices for pint and quart are postpaid; peck and bushel prices buyer pays express charges.

Ornamental Grasses Mixed

These Grasses, if cut before they are entirely ripe, will be found useful in the formation of winter bouquets, in connection with the Everlastings. More than ten of the very finest sorts are included in this mixture. Large packet, 5c.

Everlasting or Eternal Flowers

Indispensable for winter and Christmas decorations. Cut before entirely ripe, and hang heads downward in a cool, dark place. This collection contains Acroclinium; Ammobium, Gomphrena, Helichrysum, Rhodanthe and Xeranthemum, all the finest varieties, mixed. Large packet, 6c.

Golden Bantam Sweet Corn:

Far and above the best of all early varieties. Extremely hardy, and can be planted earlier than any sweet corn—and said to be ready for the table sooner than any other sort. It is very rich, and sweet in flavor, and far ahead of Cory and all older sorts in this respect. Packet, 2 oz., 10c.; ½ lb., 35c.; 1 lb., 60c.

Swiss Chard: Can be used all summer and repeated cuttings can be made from same plant. Called "Cut and Come Again Spinach." If you have room for but one vegetable in your garden, this is it. Far superior to the common beet for greens and equal to spinach. Sown early in the spring, in rows 16 in. apart, thin out to 6 in. Is fit for use for greens sooner than any other variety. For summer use it is superior to spinach, because it can be cut throughout the entire summer and fall.

Packet, 5c.; oz., 25c.; ½ lb., 75c.; 1 lb., \$2.50.

Endive: Broad-leaved Batavia. The Escarolle the French use so largely for salads; leaves used for greens, and in France the most popular of all salad for fall and winter. Very sweet and very pleasant.

Cos Lettuce Trianon

I have grown Cos Lettuce for many years, and each year as I gather the immense heads (sometimes 1 foot high and weighing 3 or 4 lbs.), blanched to a crystal whiteness and so tender and sweet you cannot refrain from eating them, I wonder why it is they are so little known. They are better than any other Lettuce. We always use them in preference to any other sort. Tie together six days before using.

Trianon Self Folding Cos

Very early, very white, tender and sweet. Packet, 5c.; oz., 20c.

White Paris Cos. Used by the French more largely than any other, rather later than Trianon; produces heads weighing 6 lbs. Pkt., 5c.; oz., 20c.

Kohl-Rabi White Goliath

Growing as large as a croquet ball. The flesh is sweet, tender and delicious; equal to cauliflower and far superior to Turnips. Plant early and begin to use when size of medium orange. Cook like Turnips, mashed or cut in cubes and creamed.

Packet, 5c.; oz., 25c.

Celeryac: A Celery producing a root like a turnip. An excellent vegetable, highly flavored, sweet and pleasant. Equal to Celery and ready much earlier, and a good easy-keeping winter vegetable. Packet, 5c.; ½ oz., 25c.

Witloof-Chicory, or French Endive

The principal use of *Witloof* is as a winter salad, and it is most delicious served with French dressing and eaten like Cos lettuce. The seed should be sown in the open ground not later than June, in drills two to eighteen inches apart, thinning out the plants so that they will stand not closer than three inches. The plant forms long parsnip-shaped roots, and these should be lifted in the fall, cutting off the leaves and then store in soil in a cool place until wanted for forcing. The roots should be planted in a trench sixteen to eighteen inches deep and placed upright about one and a half to two inches apart, which will allow the neck of the root to come within nine inches of the level of the trench. The trench should be filled with a light soil, and if a quicker growth is desired, this can be accomplished by a mulch of fresh manure about two feet deep. It requires about one month to force the roots, and the heads are cut off with a neck of the root attached. **Packet,**

Tomato—Chalk's Early Jewel

The largest, smoothest, and finest flavored extra-early bright red Tomato! Within a week to ten days as early as *Sparks' Earliana*, it is even a heavier cropper, with tomatoes of larger size and sweeter flavor,—produced continuously throughout the season.

and of remarkably fine sweet flavor. **Per Packet, 10c.; 3 for 25c.**

The plants are of strong robust growth, with ample foliage to protect the fruits from sunscald, and not liable to blight.

The bright scarlet fruits are smoothly round, very deep, and solidly meaty, with only a few quite small seed-cells

Kale, or Borecole

This is a popular boiling-green for fall, winter, and early spring use, resembling cabbage in flavor. The plant is entirely hardy in well-drained soil and can be grown easily from seed planted during the summer and fall months. The plants are usually cut off for use when the leaves are six inches or more in length, but with the fine curled varieties the leaves can be gathered for use when of good size. With the *Tall Scotch* and other large-leaved varieties it is customary to pull off the lower leaves and let the plant grow on to furnish a continuous supply. The sweetness and flavor of these greens are improved by freezing weather. One ounce should produce four thousand plants. **Packet, 10c.; oz., 20c.; ¼ lb., 50c.**

New Bohemian Horse Radish

It is a much more rapid grower than the old variety and is ready for use a great deal earlier. Its large white roots are produced in almost any soil and can be very easily raised. Plant the roots in rows and the large roots may be dug or plowed up like potatoes.

The quality of this Horse Radish is of the very best and it is in all respects a decided improvement on the old variety.

Set or Roots, 6 for 25c., postpaid; per doz., 40c.; 50 for \$1.00.

Chives

Cress—Water

This can be grown in any moist place. **Packet, 10c.**

Leeks

The Leek is a very hardy plant with a sweet onion-like flavor. It does not make bulbs, but the plant has a long thick neck somewhat resembling the young growth of the onion in the spring. These necks or stems are blanched in the fall by drawing the earth up about them as the plants increase in growth; or they may be taken up and set in trenches in the same manner as celery for blanching. The flavor is greatly improved by freezing, and the large stems can be kept in excellent condition until well on in the spring. One ounce will plant 100 feet of row. **Packet 10 cts.**

Thyme (*Thymus vulgaris*). The leaves are used for seasoning; a tea is also made for nervous headache. **Per pkt. 10 cts.; oz. 40 cts.; ¼ lb. \$1.25.**

Milla Biflora. (Frost Work.)

The flowers have the oddest and most beautiful appearance imaginable. They appear like the most beautiful waxwork, only enlivened by a living sparkle. The center is lovely, the anthers are a delicate lemon yellow. The pistil is curiously carved, and usually covered with honeydew. The **fragrance is delightful**. Place a stalk in water and the flowers will all open. We have seen eleven stalks shoot up successively from one bulb. The bulbs will flower profusely with great certainty.

Giant Spring Ranunculus.

These from spring planted bulbs give most astonishing results. Plant very early in partial shade, and water freely, and in a few weeks you will have a show of large double flowers, which even roses cannot surpass.
